32 Kitabu cha Sala na Nyimbo, a zsnakepya kwa maendeleo. Kinesial thermography of the larynx: initial experience. Kinesial thermography has been used in medicine for many years, primarily in the field of sports medicine. The purpose of this study is to evaluate the use of this diagnostic modality in the field of otolaryngology in the evaluation of patients with known or suspected head and neck cancer or laryngeal pathology. Sixty-seven consecutive patients (22 males, 45 females, age range 13 to 76 years) with abnormal upper aerodigestive tract conditions were evaluated by three observers using a Kinesial thermography camera. All patients underwent a full otolaryngologic evaluation, laryngoscopy, and computed tomography or magnetic resonance imaging, and a standard clinical work-up. This report summarizes the otolaryngologists' interpretation of the findings. The area of maximal temperature change correlated best with the site of disease. Temperature differences between the epiglottis, vocal folds, and arytenoid cartilages were consistent with the presence of disease. Postoperative findings were compared with pretreatment results. Use of Kinesial thermography should be considered in the evaluation of patients with suspected head and neck cancer or laryngeal disease. Ultrastructural demonstration of myxofibrosarcoma, fibrosarcoma and malignant fibrous histiocytoma of bone in a young adult (case nos. 1, 2 and 3). Two cases of myxofibrosarcoma, one case of malignant fibrous histiocytoma and one case of fibrosarcoma were studied. The ultrastructural features were compared with the literature data. In the present study the ultrastructural features of fibrohistiocytic sarcoma and fibrosarcoma were the same as those described in the literature. These cases could be included in the malignant fibrous histiocytoma of bone. The difference between the malignant fibrous histiocytoma of bone and the so-called myxofibrosarcoma was not elucidated. In the above paragraph, I have attempted to define what I think a good "Platonic mentor/mentee" relationship should be. I also mentioned the need for mentees to recognize, embrace, and f678ea9f9e
